

XPLORE 120/12 Battery Charger

All charging needs in one charger

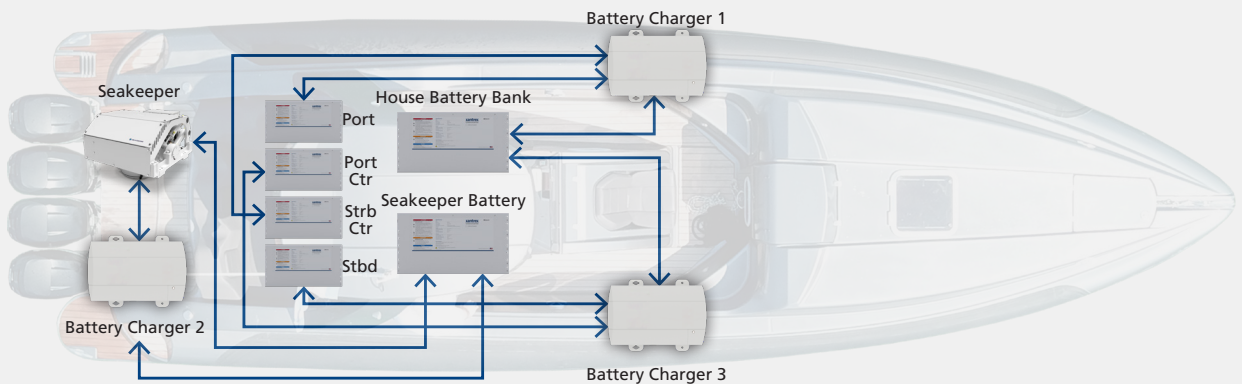

Today's multiple outboard boats typically require numerous battery chargers to ensure that the engines and all onboard equipment are well maintained. Gyro stabilizers are among the highest power-consuming equipment and require a high-output charger to support the 70–90 amps of DC spool-up power. Most builders must install three chargers to support this application.

The XPLORE 120 A 12 Vdc six-bank, dual chemistry battery charger can consolidate multiple battery bank chargers into a single unit. This streamlines the installation process and wiring thereby reducing cost, installation time, space required, and the overall weight.

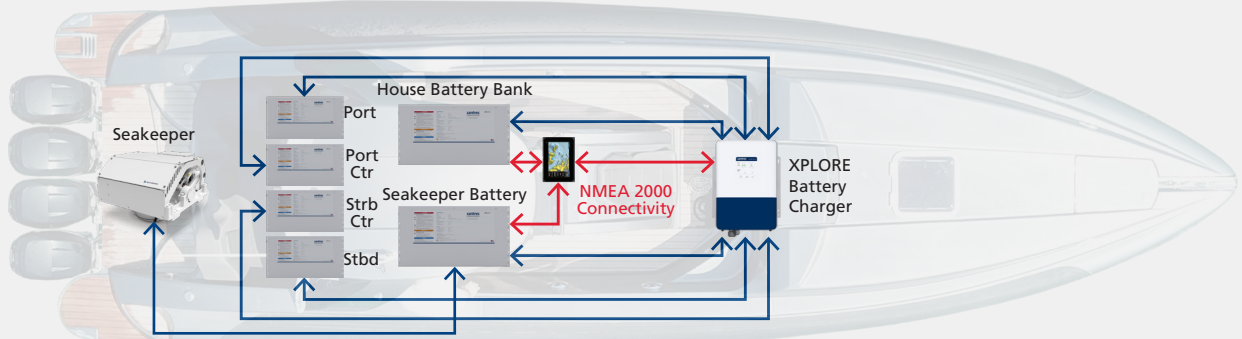

-  Six battery bank charging
-  Dual battery chemistry charging
-  Designed to charge Lithium batteries
-  Ability to charge dead batteries down to 0 V
-  NMEA 2000 monitoring and configuration
-  Xantrex App monitoring and configuration
